Period for Reply

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 and 18-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krischer in view of Matte.

Krischer teaches a collection device where the respective walls are shown with an opening 14 and the base portion with lip and rim are seen in Fig. 3. Lacking is the lower wall that extends further than the top wall. Such a lower wall is taught by Mette as seen in Fig. 2 at 2. To provide for such wall to be employed in Krischer would have been obvious to the ordinary artisan in order to prevent splash outwardly. Re: claims 20-21, with the provision of the lower wall as set forth above the combination would possess a "continuous" edge, as would any receptacle with an opening.

Claims 5-17 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4/11/05.

Whitman and Lamb show other splash guards.

Any inquiry concerning this communication should be directed to Charles Phillips at telephone number 571-272-4893.
